

Endogel-RC & Endo-L

Known as: Chelating Material

Endogel-RC: It is water soluble Ethylene Diamine Tetra Acid (17% EDTA) in gel form for root canal cleaning.

Endo-L: It is water soluble Ethylene Diamine Tetra Acid (17% EDTA) in liquid for root canal cleaning & Smear Layer Removal.

Description: For use as root canal lubricant during mechanical instrumentation in endodontic treatment of teeth. For use as a root canal conditioner during chemico-mechanical preparation of calcified root canal and shaping the canal, aiding in the softening of the calcifications and removal of debris from the prepared tooth.

Packing:

Endogel-RC: 3 g x 1 syr + 3 Applicator tips

Endo-L: 100ml Bottle Refill

Product Code:

Endogel-RC: 9202/003

Endo-L: 9201/100

Properties & Advantages: Effective chelating, lubrication, deburring water-soluble material. It facilitates root canal preparation.

Benefits:

- 17% Liquid based EDTA.
- Used to flush out the debris from canal.
- Removes the smear layer from dentinal walls.
- Also helps in removal of calcium hydroxide oil based from the canals.
- Mechanically activated using an endo brush.

Shelf life and storage:

- Best before 24 months under proper storage.
- Always close the cap immediately after use.
- Store at a temperature between 10°C to 30°C.
